IT & Systems Bachelor. Graduate with high distinction. (2001-2004)
Ecole Pratique des Hautes Etudes Commerciales – EPHEC – Louvain-la-Neuve
Thesis : « Analyse et conception d'une 'Dataweb' avec UML ».

Professionals:

Freelance Technical Analyst – owner – QPware (06/2015 – ongoing)
As I started as freelance, I kept the same customer, AG Insurance. I am in charge of developing and maintaining web applications mainly, but also batches and win applications. I still write technical analysis, writing unit tests, reviewing code from developers and coaching new team members. I am still a Technical Leader with the added responsibility of ALM (Application Lifecycle Management). This means I follow the technical migration of components used by our application: this goes from the internal framework to the Microsoft framework through third parties assemblies. For this role, I plan follow up meeting on a regular basis, coach people executing the migration and give non-regression testing advise to the owner of the applications. The main field of applications I am working on is for Solvency II Business.

Technical Analyst – TRASYS (02/2010 – 09/2015)
Continuity of the latest mission from my previous employer, I'm still working on that mandate. I am in charge of developing web applications, based on the framework .NET 4.0, writing technical analysis, writing unit tests, reviewing code from developers and coaching new team members. I am also part of the team thinking and defending evolutions of all kind (framework, tool, methodology, …). I am also involved in

application architecture and project management. I am involved mainly in Life applications for the first 2 years. The three latest are mainly focusing on Solvency II applications.

Analyst - Developer – SOFT-MAINT BENELUX (10/2006 – 01/2010)

My 1st mission (from 10/2006 to 03/2008) at AXA Belgium, was mainly dedicated to functional testing. The main tasks was writing requirements and their test cases, executing the tests and populate the set of non-regression tests.

My 2nd mission (04/2008), was as Java developer on a Proof Of Concept for a technical migration from COOL-Gen to Java. I worked on correcting the code generated by the tool used for the migration.

My 3rd mandate was from 05/2008 to 08/2009. It was a project of technical migration from VB6 to C# on the framework .NET 3.5. The 3 latest months were for the guarantee period.

My 4th mission (from 06/2009 to 01/2010) at Fortis Insurance Belgium (now AG Insurance), was about development of Web & Win applications using .NET3.5 framework. Due to my application migration experience, I was involved in taking decision about rewriting versus technical migration for several projects.

During the last two years (2008 & 2009), I have been involved in writing response to Request For Proposal in scope of migration project and their defence at clients.

Technical skills:

Languages	*.NET 4.5 ; .NET 4.0 ; .NET 3.5 ; WCF ; ASP.NET MVC ; UML ; XML ; SQL ; CSS ; JavaScript ; JQuery ; Bootstrap ; Angular ; PHP ; MySQL ; VB6 ; Java ; C*
Systems	*Windows ; Mac OS X ; Linux*
Tools	*Visual Studio 2013; Visual Studio 2010 ; Quality Centre ; Visual Paradigm for UML ; Star UML ; Microsoft Office ; Open Office ; Eclipse ;*
PM Methodology	*Scrum ; Prince 2*

Certifications:

10/12/2014	*Microsoft Certified Professional - Programming in C#*

Personnal skills:

Rigorous & Conscientious
Pro-active & Autonomous
Organized & Responsible
Stress proof
Oral and written easy.

Have the B license and a personal car.

Languages:

French	*Mother tongue*
English	*Fluent*
Dutch	*Moderate*
Italian	*Moderate*
